

Tracing artifacts in your software development projects is too time-consuming and error-prone?

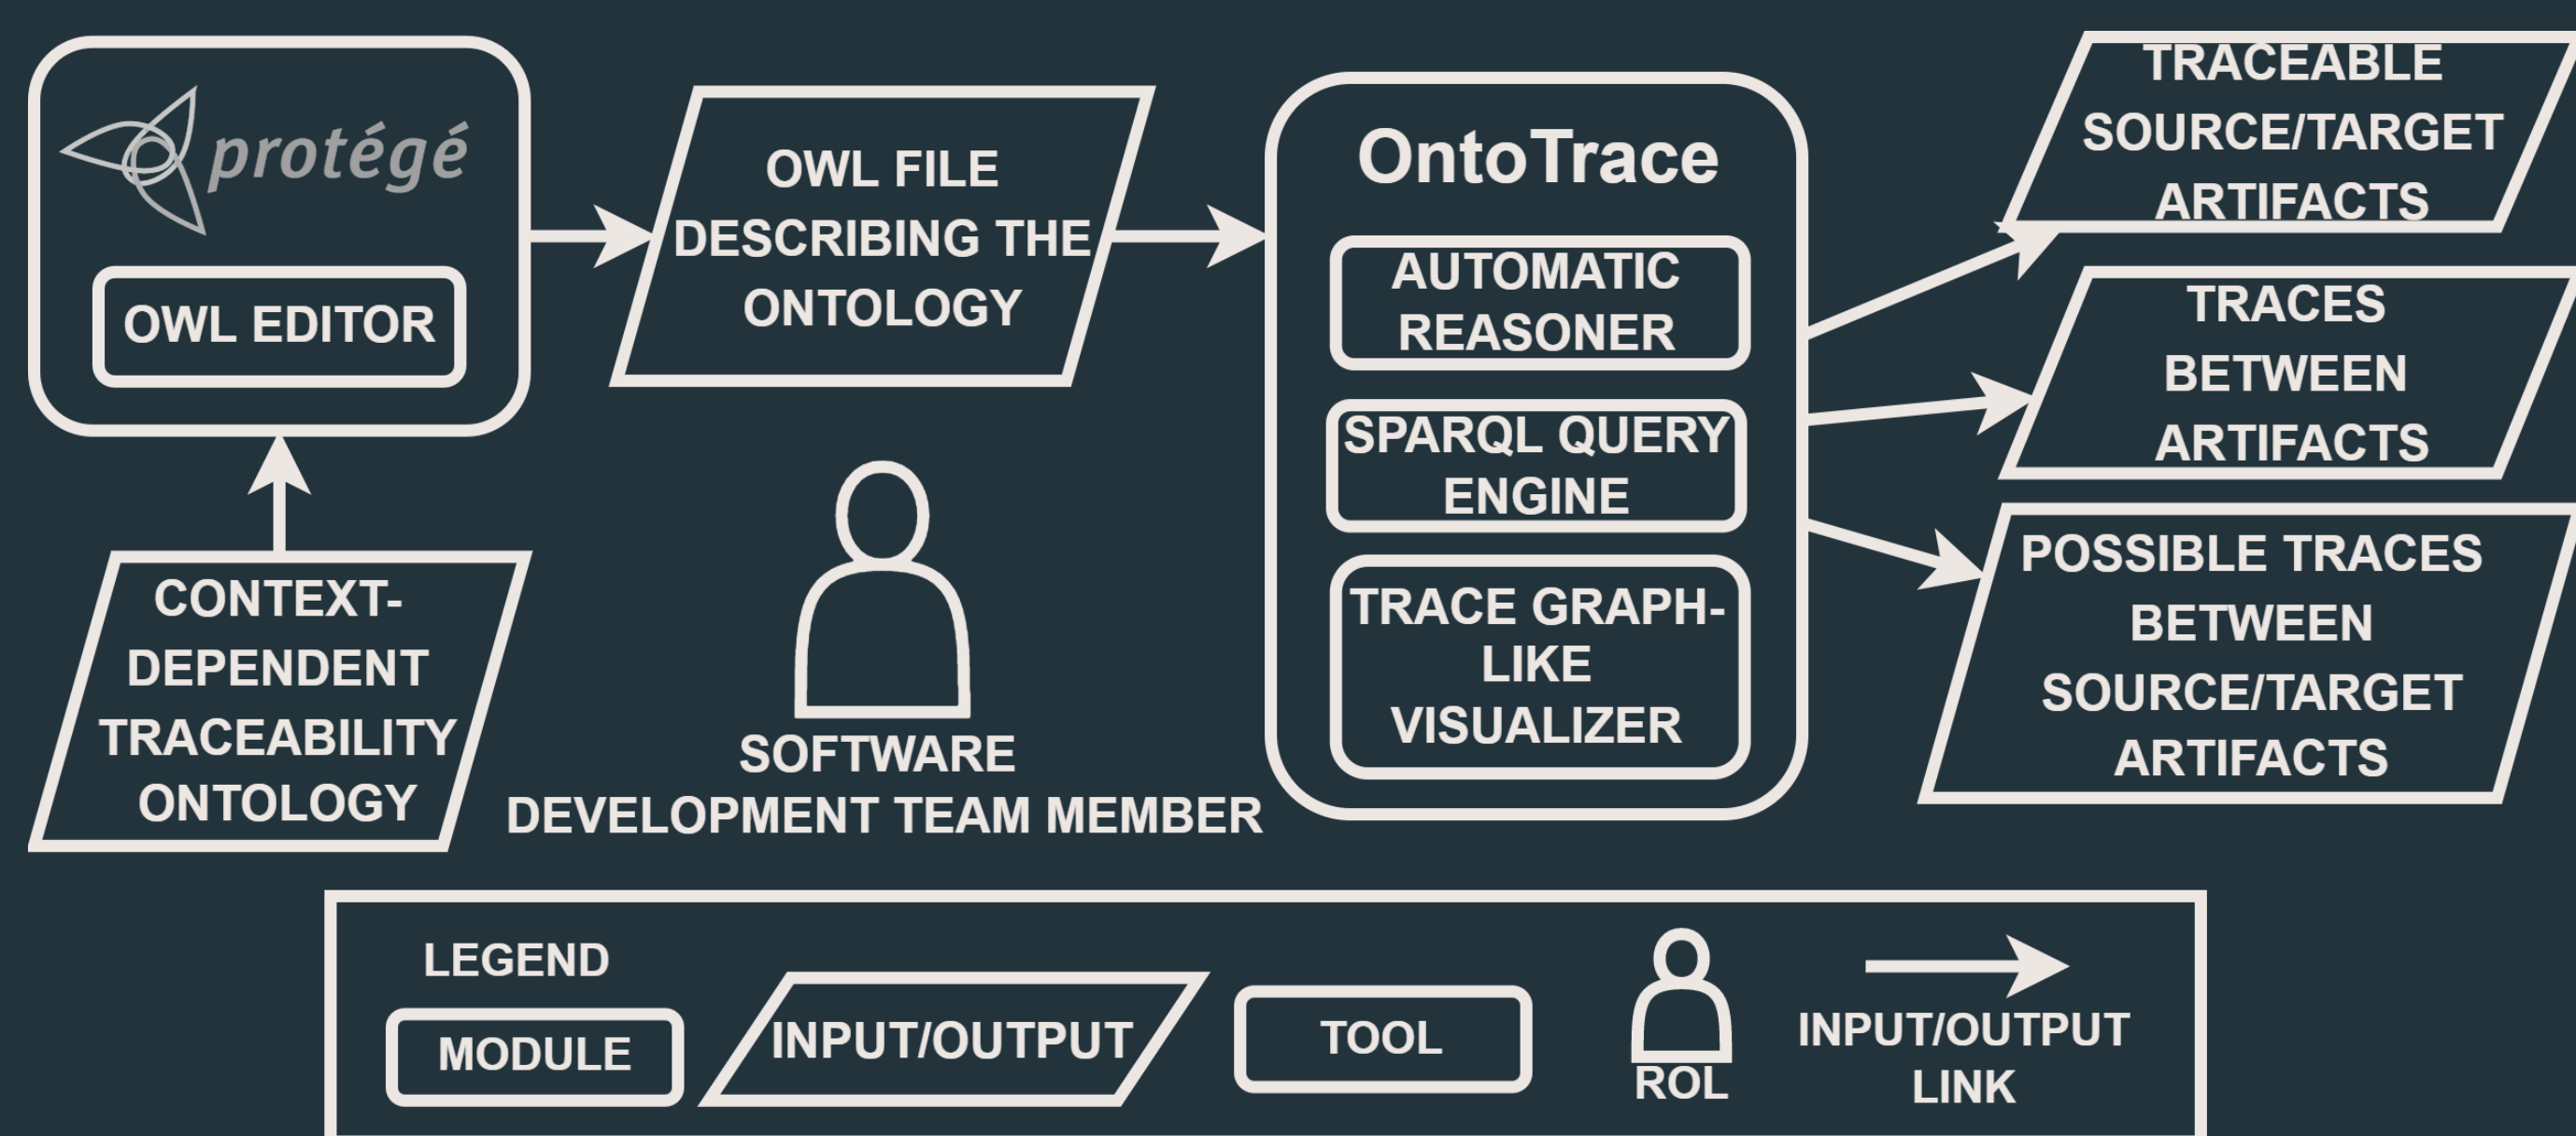

Let **OntoTrace** help you 

Why OntoTrace is different?

- # OntoTrace **does not rely on historical-traceability data**
- # OntoTrace **is not restricted to specific artifacts**

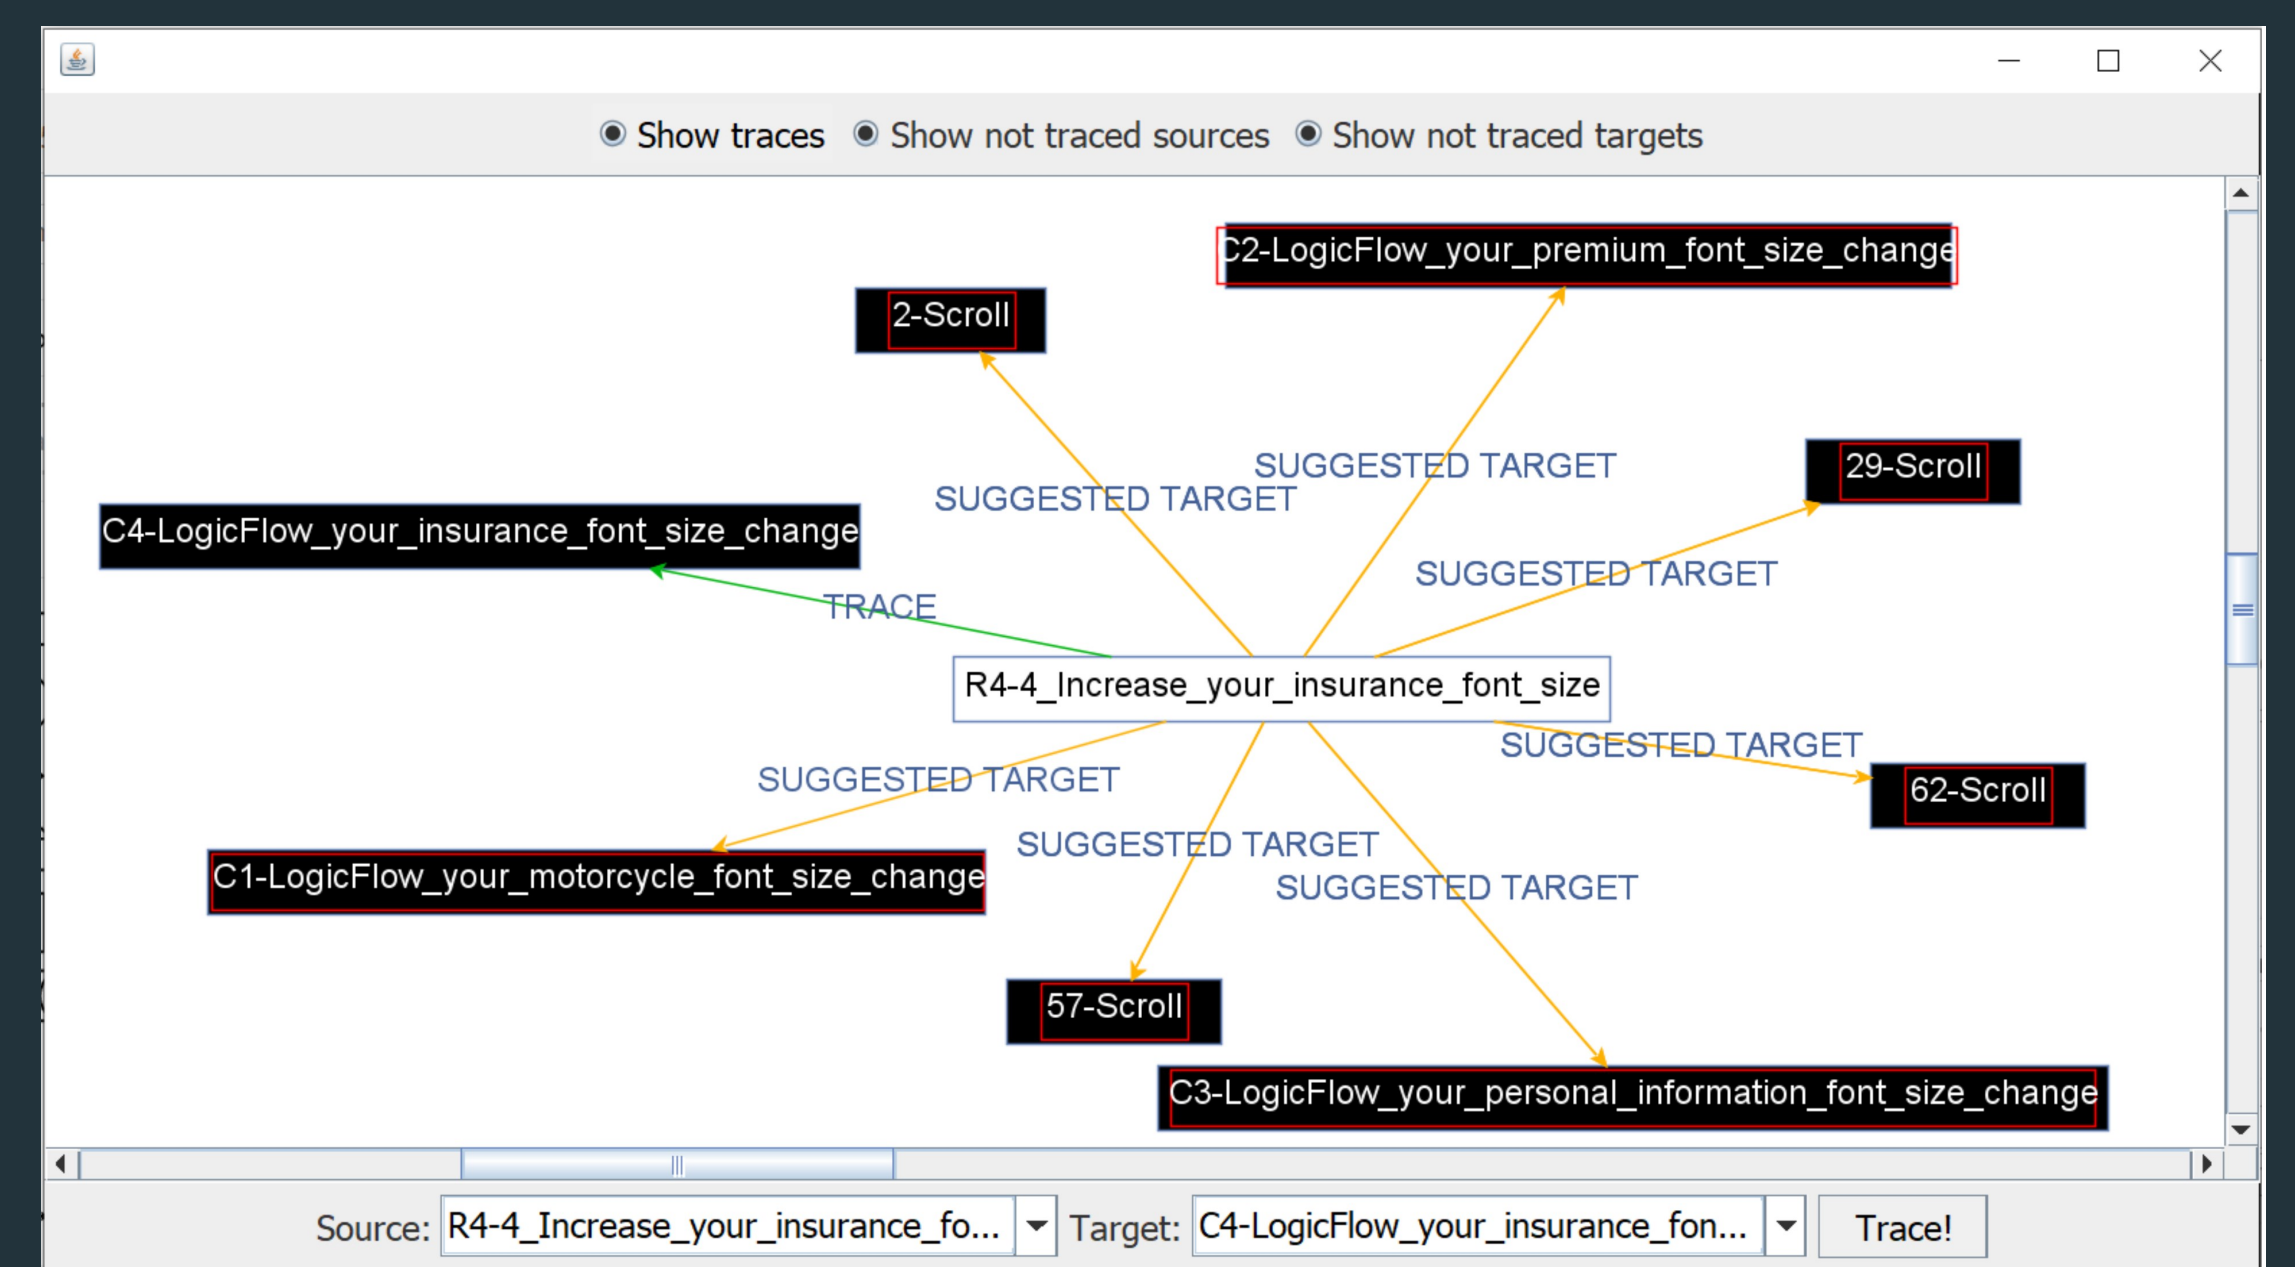

How OntoTrace works?

Ontologies, automatic reasoning, SPARQL...

How OntoTrace looks like?

V1.0 Standalone graph-like app – V2.0 web app

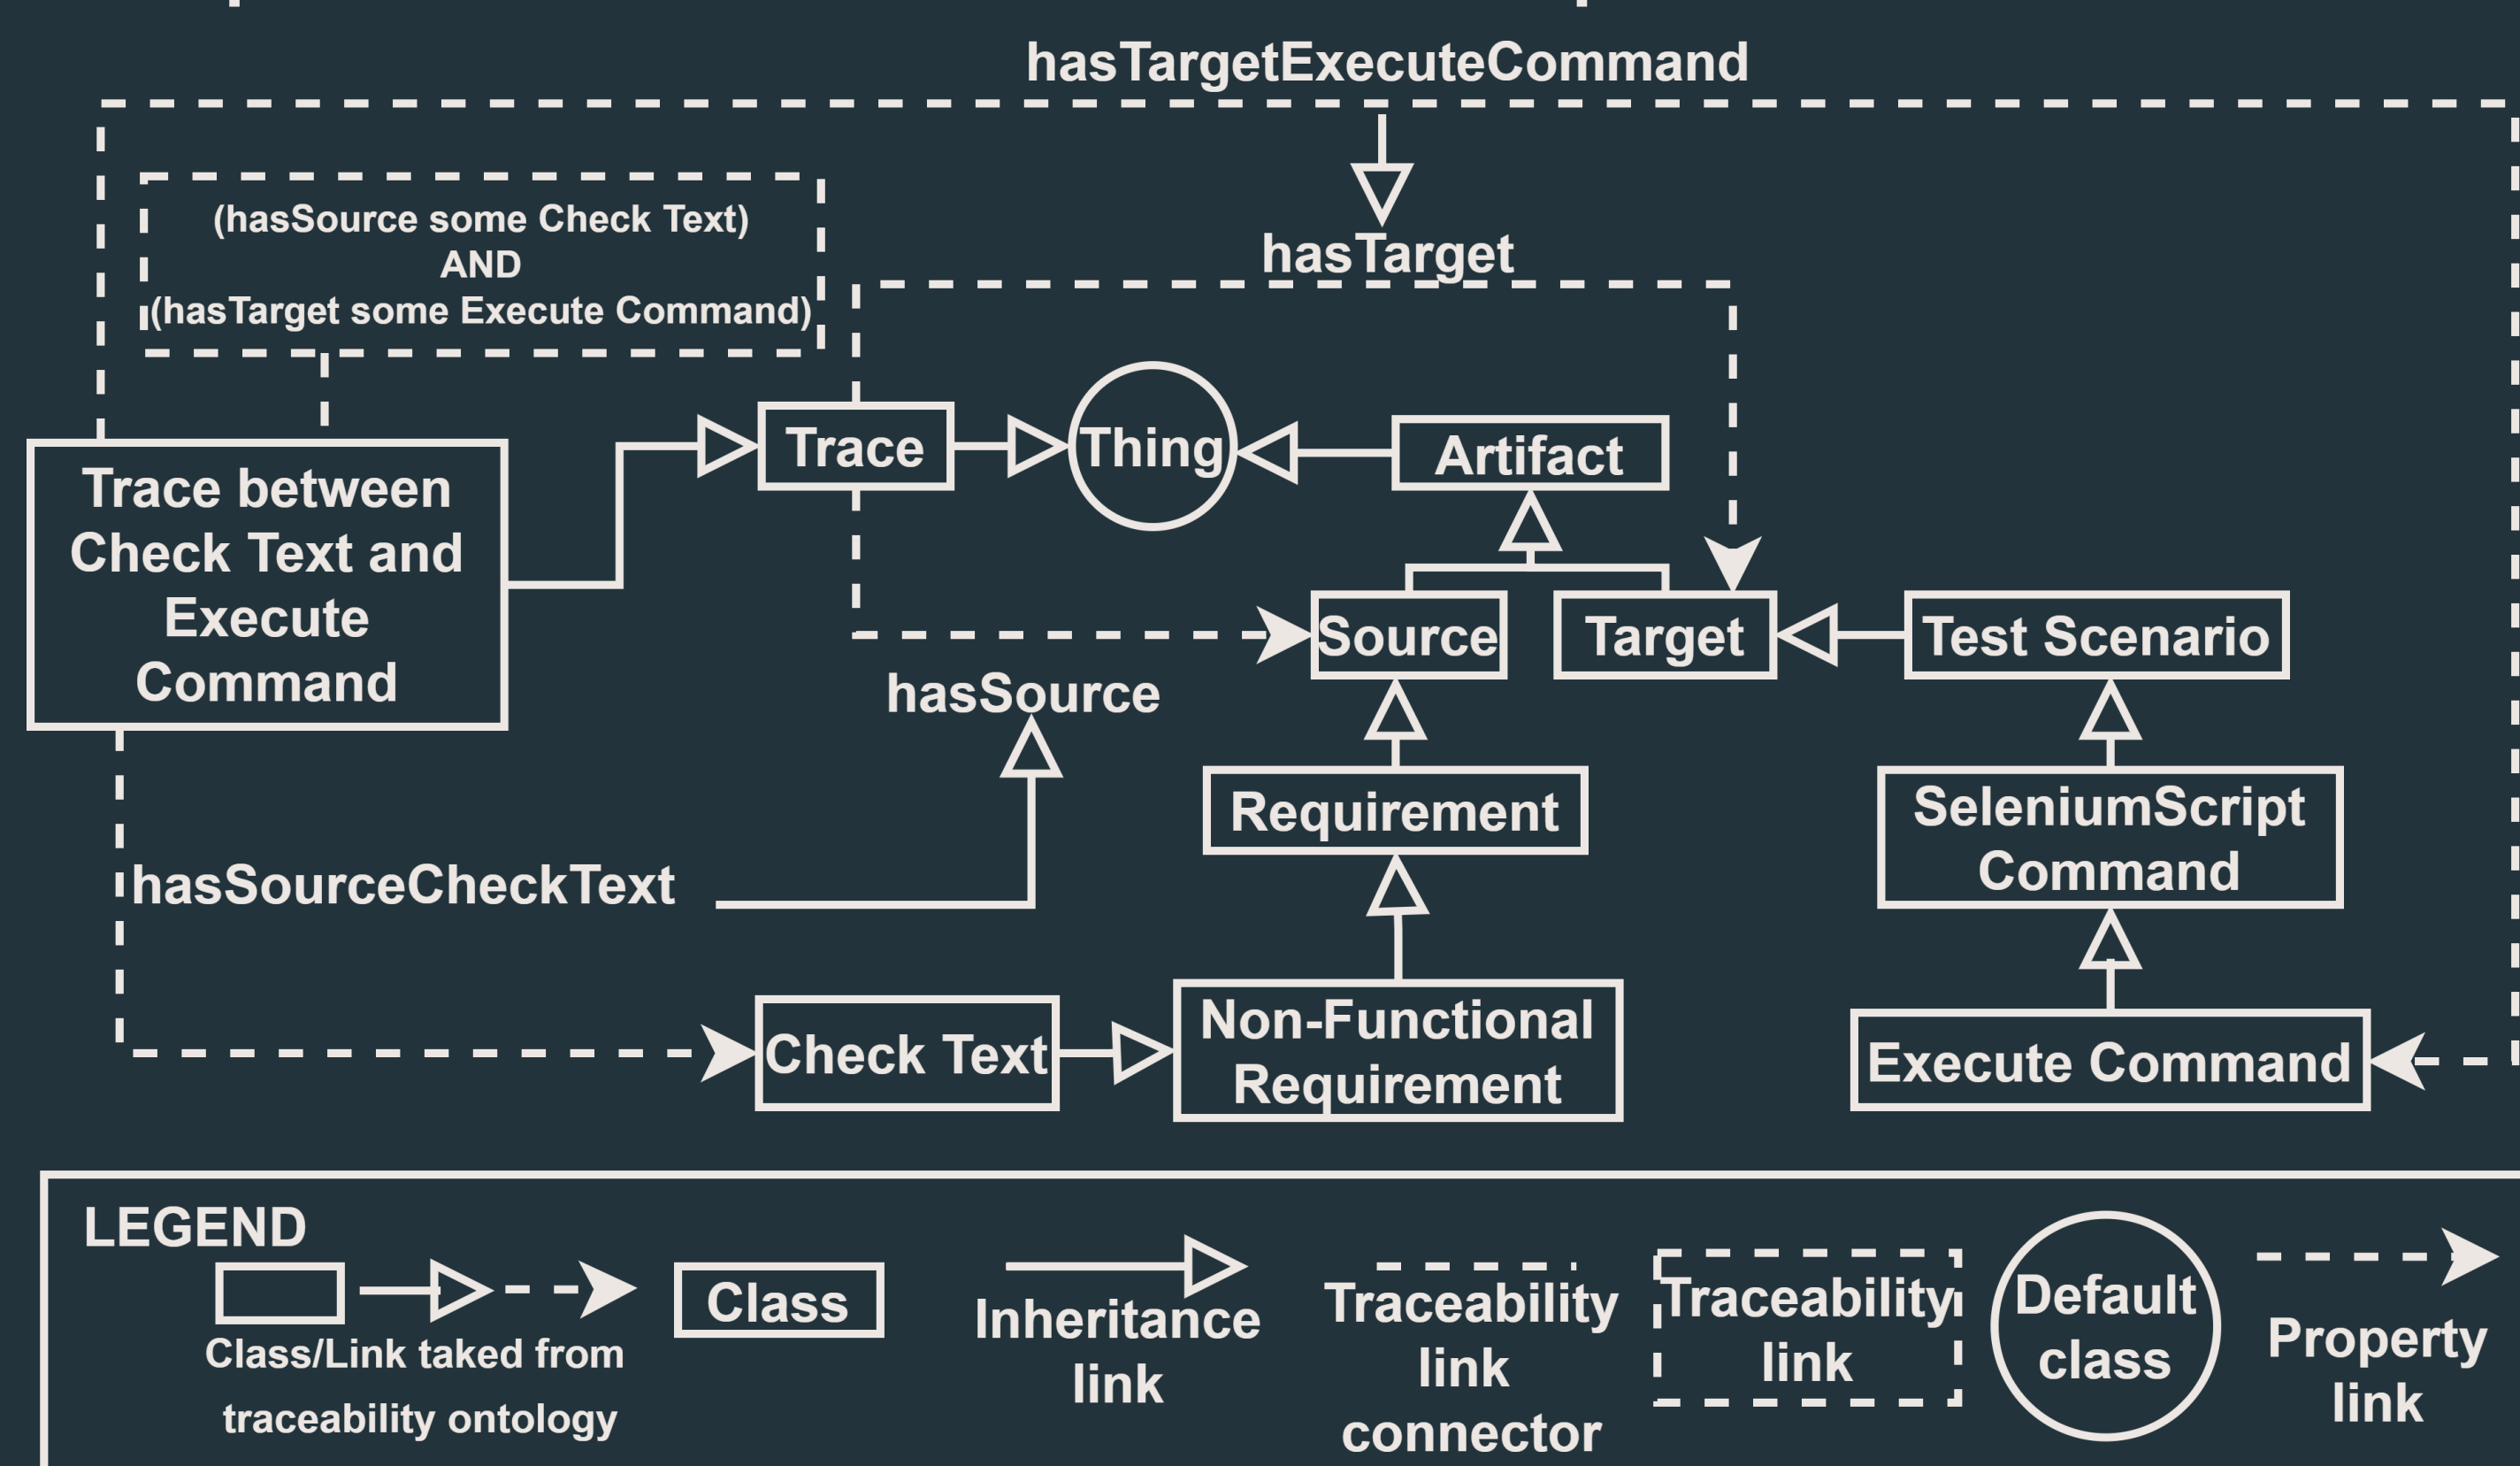

What is next for OntoTrace?

- # Automatically generating traces (ML?)
- # Automatically creating artifacts
- # Improve ontology maintainability
- # Conducting experiments

What is OntoTrace capable of?

Requirements to SeleniumScript tests
